

The short version

The intranet brings the tools RHG uses into one place that everyone can open: expense claims, leave, inspection reports, projects, product information and cost modelling, plus posts, events and company figures on the dashboard. It replaces paid apps that only a few people can use, and it costs far less to run.

About AUD 7,500

a year spent today on
AuditComply and Asana

About AUD 550

a year to run the intranet

About AUD 20,900

saved over 3 years, with more
people able to use it

What we pay today compared with the intranet

Tool today	Cost per year	In the intranet
AuditComply	AUD 5,000	Inspection Reporting: only 5 people can use AuditComply and we use about 20% of it
Asana	AUD 2,500	Projects: limited seats, and some tasks are handled outside it
Plytix (stopped)	about AUD 6,000*	Product Information: we have had no single source of product data since it stopped
Excel VBA expense sheets	staff time; market apps start at RM 3 per user per month (about AUD 190 a year for 15 people)	Expense Claims: one change in one place instead of editing every sheet
Jibble (leave)	free (via Eurogain)	Leave Applications: same job, in the same place as everything else
Employment Hero**	about AUD 24 per user per month	Posts and leave for the AU team can move here; policies and performance management are in "More to come"

* Plytix was about AUD 500 a month. This figure comes from the Plytix website (Pro plan) and still needs to be confirmed with finance. The saving above does not count Plytix, because we have already stopped paying for it.

** Estimate from the Employment Hero website (Core plan), to be confirmed with finance. Not counted in the saving, because only part of what it does would be replaced.

Running cost over 3 years (AUD)

Item	Year 1	Year 2	Year 3	3 years
Hosting (Railway)	90	90	90	270
Database and sign-in (Supabase Pro, includes backups)	450	450	450	1,350
File storage (Cloudflare R2), free up to 10 GB	0	1	2	3
Custom domain (intranet.rapidhardwaregroup.com.au)*	0	0	0	0
Total	about 540	about 540	about 540	about 1,630

* A subdomain of the existing company domain, so it only needs a DNS entry and no extra fee (to be confirmed with whoever manages the domain). Buying a separate new domain would be roughly AUD 20 to 30 a year.

Compared with AUD 7,500 a year on AuditComply and Asana, that is about AUD 22,500 over 3 years against about AUD 1,630: a saving of about AUD 20,900. Prices are from each provider website and assumed unchanged. Not included yet, to be confirmed: a company email service for sign-up and notification emails, and Microsoft sign-in.

How much we expect to store

What	Per month	First year
Posts (3 a month, one 2 MB photo each)	6 MB	72 MB
Expense claims (15 people, 6 claims each, 200 KB each)	18 MB	216 MB
Leave (15 applications a month, one 1 MB attachment)	1 MB	12 MB
Projects (10 a month, 20 MB each)	200 MB	2.4 GB
Inspections (10 a month, 30 MB each)	300 MB	3.6 GB
Product information (200 products, 3 photos of 5 MB each)	one-off	3 GB
Total		about 9.3 GB

Storage grows to about 16 GB in year 2 and 22 GB in year 3. Beyond the free 10 GB, the extra cost is a few cents a month, so growth does not change the picture.

Why it is worth more than the saving

- One source of truth: everyone looks in the same place instead of asking around or going through layers of people.
- More people can see what they need: inspection reports are no longer limited to 5 AuditComply users, and company figures reach everyone, not only when they are shared each quarter.
- Built for RHG: the project summary, expense rules and inspection forms follow how we work, instead of paying for features we never use.
- Changes are quick: a change is made once, not on every employee's Excel sheet.

Tools

Tool	What it does for the team
Expense Claims	Submit claims with receipts, managers approve, payroll report ready for finance.
Leave Applications	Apply, approve, live balances, team calendar, public holidays.
Inspection Reporting	Phone-friendly QC checklists with photos, review and sign-off, PDF report for anyone.
Projects	Task lists per project type, automatic due dates when a task unlocks, project overview for the whole company.
Product Information	One catalogue of every product: suppliers, packaging, photos, documents, completeness score.
Cost Modelling	Landed cost and margins for any product, anyone can use it.

Dashboard

- Posts and announcements that everyone can read, comment on and react to.
- Upcoming events and public holidays; who is away today.
- Sales, goals and project overview charts, visible to everyone.
- Favourite tools and "my tasks" at a glance.

More to come

- **Company Microsoft 365:** Allows sign-in, important notifications and project tasks or status reports via company email.
- **HR module:** Company policies and employee performance management.
- **Container planning module:** Data from Product Information feeding into Cargo Planner for container optimisation.
- **API connections:** Lets other company software read or send data to the intranet securely, so figures only need to be entered once.
- **AI assistant:** A chat assistant you can ask questions or tasks, such as leave balance, open inspections or at-risk projects. It only sees what each person is already allowed to see, and asks for confirmation before changing anything.

AI assistant: optional extra cost

How much it is used (about 20 people)	Questions a month	AUD per month
Light: a few questions each per week	about 400	about 40
Moderate: 2 questions a day each	about 900	about 90
Heavy: 5 questions a day each	about 2,200	about 230

Estimate at about AUD 0.10 per question, paid only for what is used, and a monthly spending limit can be set. Not included in the running cost above.
